Cross Ram Support

Cross Ram Support for cross ramming, a technique to create space when parts of the vehicle are deformed and obstruct a safe patient extrication. With the help of a ram the car construction is pushed back into its original shape.

Opis produktu:

The set of two supports helps you to distribute the force of the ram over a larger area and prevents it from pushing through the car construction.

Key Features

- Durable and corrosion resistant
- Can be used in different orientations
- Suitable to use with all rescue rams available on the market
- To help you work safer and easier

Technical data

- Max. load: 160 kN / 16 tons
- Dimensions: 450 x 400 x 85 mm
- Weight: 9,5 kg
- Production technology: Welded
- Material: Carbon steel 10 mm thick

Primary Applications

- Vehicle extrication (ram support)
- Force transfer onto bodywork contact points
- Stabilised pushing with rescue rams
- Use with belts/chains for positioning
